

RouterBOARD mAP lite

Quick Setup Guide and Warranty Information

The mAP is a small AP device with one ethernet port, the Ethernet port supports powering by PoE.

First use

1. Plug the included USB power adapter into the power socket, and connect the USB cable to the mAP lite
2. Connect your Internet cable to the mAP lite Ethernet port
3. Wireless AP mode is enabled by default, you can connect from your computer to the SSID "MikroTik". Log into the mAP router from your web browser by opening 192.168.88.1 in the address bar

Powering

The device accepts powering from the USB port or from the Ethernet port:

- micro USB power jack accepts 5V DC, a USB 5V adapter is included with the product
- The Ethernet port accepts passive Power over Ethernet 11-57V DC.
- The Ethernet port also accepts PoE power from a 802.3af switch over the pins +4,5/-7,8 or +3,6/-1,2

Under maximum load, the power consumption of this device is 4W.

Booting process

The device is preinstalled with MikroTik RouterOS software. It can be configured in several ways.

This device doesn't come fitted with a Serial Port connector, so initial connection has to be done via the Ethernet cable. Connect to wireless SSID "MikroTik" and open **192.168.88.1** in your web browser. Username is **admin** and there is no password. In case IP connection is not available, Winbox can be used to connect to the MAC address of the device. More information here: http://wiki.mikrotik.com/wiki/First_time_startup

In case you wish to boot the device from network, for example to use MikroTik Netinstall, hold the RESET button of the device when starting it until the LED light turns off, then release the button and the device will start looking for Netinstall servers.

By default, the device is preconfigured with a simple firewall on the WAN port, this configuration can be viewed when first connecting to the Router via Winbox. It will ask whether to keep this configuration or clean it to use your own. LAN/WLAN ports have DHCP server enabled.

Extension Slots and Ports

- One 10/100 Ethernet port, supporting automatic cross/straight cable connection (Auto MDI/X), so you can use either straight or cross-over cables for connecting to other network devices.
- One Integrated Wireless 2.4GHz 802.11b/g/n 2x2 MIMO, Onboard PIF antennas, max gain 2dBi
- One microUSB 2.0 port for powering only

Resetting the device

In case you wish to return the device to its original configuration, you can use the RESET button. Hold this button during boot time until LED lights start flashing, then release the button to **reset RouterOS configuration**. You can use this procedure if you have forgotten the password to access the device, or simply wish to return the unit to its default configuration state.

Buttons and Jumpers

1. Hold this button during boot time until LED light starts flashing, release the button to reset RouterOS configuration (total 5 seconds)
2. Keep holding for 5 more seconds, LED turns solid, release now to turn on CAPs mode (total 10 seconds)
3. Or Keep holding the button for 5 more seconds until until LED turns off, then release it to make the RouterBOARD look for Netinstall servers (total 15 seconds)

Operating System Support

Currently tested operating system is MikroTik RouterOS starting from version 6.30

Federal Communication Commission Interference Statement (FCC ID: TV7RBMAP2N)

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This device and its antenna must not be co-located or operation in conjunction with any other antenna or transmitter.

IMPORTANT: Exposure to Radio Frequency Radiation.

23 cm minimum distance has to be maintained between the antenna and the occupational user and 75 cm to general public. Under such configuration, the FCC radiation exposure limits set forth for a population/uncontrolled environment can be satisfied.
